

# Clarification Statement

## on the data transfer between IMDS and CAMDS

As the ELV regulation entered into force in China and other countries, the automotive industry has started to collect material data. To comply with the legal requirements of different countries, a number of enterprises need to report material data twice in China Automotive Material Data System (CAMDS) and International Material Data System (IMDS). To avoid the repetitive work and promote the efficient management of material data, CAMDS Management Committee and IMDS Steering Committee have conducted in-depth research and discussion on data transfer between the two systems and reached the following agreements.

- 1、 The responsibility to decide to transfer IMDS data to CAMDS and vice versa remains with the respective user providing the data. IMDS Steering Committee and CAMDS Management Committee are not prohibiting data transfer. The data providing user shall evaluate whether the IMDS and CAMDS Terms of Use, the AI Terms and Conditions and the defined “Target System Requirements” shall be met and shall take the responsibility related to data transfer.
- 2、 To ensure the quality and efficiency of data transfer between IMDS and CAMDS, DXC (previously recognized as HPE) and CAMDS Management Committee will work together to develop data transfer method based on the IMDS and CAMDS interfaces to assist the data transfer from IMDS to CAMDS and vice versa by IMDS and CAMDS users.
