Nonmetallic Coatings

(mono- and multi-layer systems)

1 Purpose

This recommendation outlines the general requirements for the creation of Material Data Sheets (MDS) describing painted components. It shall be used to report complete paint systems like multi-layer vehicle surface coatings, also to describe mono coats (single paint layers) as they are being used for component painting.

For metallic coatings (electroplate/electroless) see References IMDS 007 and 008.

A paint normally consists of different layers (e.g. phosphate pretreatment, electrocoat, primer, basecoat, clearcoat). Each layer must be described separately. The IMDS Material Datasheet is requiring information on the product composition in the cured state (after heat treatment, drying, curing, hardening process). Consequently solvents as contained in the liquid paint must not be reported, as they are no longer present in the cured material.

In the case of two-component coatings, please do not report two materials (base resin + hardener, components A and B), but only one material (cured end state, reaction product).

3 Definitions

For the users' convenience, a big variety of standard cured resins (Compound of a polymeric network) are listed in the IMDS Basic Substance List as 'Basic Duromer' pseudo-substances.

You will find more than one hundred of them (lookup *basic duromer* in the substance search).

Please preferably use these pseudo-substances when you create the material entry for your resin system and add pigments and all other additives with their respective percentage.

| Name | Synonym |
|---|---|
| Acaroid Resin | Basic Duomer: Acaroid Resin |
| Acrylate Urethane Oligomer | Basic Duomer: Acrylate Urethane Oligomer resin (polymeric network) |
| Acrylated Epoxy Resin | Basic Duomer: Epoxy resin (Compound of a polymeric network) |
| Acrylic polyol resin | Basic Duomer: Acrylic polyol resin (Compound of a polymeric network) |
| Acrylic resin | Basic Duomer: Acrylic resin (Compound of a polymeric network) |
| Acrylicphenolic Resin | Basic Duomer: Acrylicphenolic resin (Compound of a polymeric network) |
| Aliphatic polyesterurethane triacrylat... | Basic Duomer: Aliphatic polyesterurethane triacrylate resin |
| Alkyd resin | Basic Duomer: Alkyd resin (Compound of a polymeric network) |
| Alkylphenolic resin | Basic Duomer: Alkylphenolic resin (Compound of polymeric network) |
| Amine modified epoxy isocyanate re... | Basic Duomer: Amine modified epoxy isocyanate resin |
| Amine modified epoxy resin | Basic Duomer: Amine modified epoxy resin |
| Anionic polyurethane resin | Basic Duomer: Anionic polyurethane resin (polymeric network) |
| Bismaleimide resin | Basic Duomer: Bismaleimide resin (Compound of a polymeric network) |
| Bismaleimide-Triazine resin | Basic Duomer: Bismaleimide resin (Compound of a polymeric network) |
| Bisphenol A resin | Basic Duomer: Bisphenol A resin (Compound of polymeric network) |
| Brominated epoxy resin | Basic Duomer: Brominated epoxy (Compound of polymeric network) |
| Butyl titanate | Basic Duomer: Butyl titanate (Compound of polymeric network) |
| Carboxy Terminated Polyester resin | Basic Duomer: Carboxy Terminated Polyester resin (Compound of a poly... |
| Carboxyl Functional Polyester resin | Basic Duomer: Carboxyl Functional Polyester resin (Compound of a polyr... |
| Cellulose Acetate Butyrate resin | Basic Duomer: Cellulose Acetate Butyrate resin (Polymeric network) |
| Copolymer of Acrylic, Polyester, and P... | Basic Duomer: Copolymer of Acrylic, Polyester, and Polyurethane Resin |

3.1 Mono Coat (single-layer paint)

This paint type consists of one layer of a simple resin-hardener system (e.g. Melamine) or a multi resin system (e.g. Acrylic-Polyester-Melamine), both with fillers (e.g. talc), pigments (e.g. carbon black, rutile) and further additives, which are intentionally introduced. It must be described as a material or a composed material.

Examples of a single-layer paint:

As single material:

 **Paint layer**

-  19.0 - 21.0% Epoxy resin
-  10.0 - 12.0% Phenolic Resin
-  15.0 - 17.0% Polyvinylbutyral resin
-  3.0 - 5.0% Silica, amorphous
-  2.0 - 3.0% Carbon black
-  1.0 - 2.0% Trizinc bis(orthophosphate)
-  Rest 45.0% Talc (Magnesium silicate)

IMDS Recommendation**IMDS 011**

Or as composed material according to REC001, 4.4.1:

- ▼ **Basecoat (Example)**
 - ▼ 80.0 - 90.0% Binder - Basecoat Component
 - 27.0 - 37.0% Polyester resin
 - 25.0 - 35.0% Melamine resin
 - 17.0 - 22.0% Acrylic resin
 - Rest 18.5% Cellulose Acetate Butyrate resin
 - ▼ 8.5 - 18.5% Pigments - Basecoat Component
 - 26.6 - 36.6% Barium sulphate
 - 28.1 - 38.1% Mica-group minerals
 - 20.0 - 30.0% Rutile (TiO₂)
 - 6.4 - 8.4% Carbon black
 - 1.0 - 2.0% Misc., not to declare
 - 0.2 - 1.2% Chromium(III)oxide
 - 0.2 - 1.2% 6,15-Dihydroanthrazine-5,9,14,18-tetrone
 - ▼ 1.0 - 1.6% Additive - Basecoat Component
 - 80.0 - 90.0% 2-(2H-Benzotriazol-2-yl)-4-(1,1,3,3-tetramethylbutyl)phenol
 - Rest 15.0% Polysiloxane

3.2 Paint System (multi-layer paint)

A complex Paint System (multi-layer paint) consists of individual paint layers. Each of them must be described as a separate material (see section 3.1).

A paint system could e.g. consist of three materials: Primer, Basecoat, and Clearcoat.

- ▼ **Multi layer paint system**
 - ▼ 20.0% Primer
 - ▼ 30.0% Basecoat
 - ▼ 50.0% Clearcoat

IMDS Recommendation

IMDS 011

3.3 Painted component

Together with the base material they are applied on, paints can be listed as part of a component.

For a component with Single-layer paint:

For a component with multi-layer paint:

3.4 Phosphate coatings (phosphate pretreatment)

Phosphate coatings, often used as pretreatment before painting metallic components, are available in IMDS as standard materials. You can select them by a Material Search, searching for “*phosphate coating” as material name and “IMDS-Committee” as supplier.

| Type | Name | ID / Version | Supplier |
|------|---|--------------|----------------|
| | Iron phosphate coating | 7029554 / 4 | IMDS-Committee |
| | Manganese phosphate coating | 9502076 / 4 | IMDS-Committee |
| | Manganese phosphate coating (Ni-content) | 7031907 / 5 | IMDS-Committee |
| | Zinc calcium phosphate coating | 7027255 / 5 | IMDS-Committee |
| | Zinc phosphate coating | 7026761 / 5 | IMDS-Committee |
| | Zinc phosphate coating Mn/Ni-content | 9501829 / 6 | IMDS-Committee |
| | Zinc phosphate coating Ni-content | 9501801 / 4 | IMDS-Committee |
| | Zinc phosphate coating, Mn-content | 9501722 / 5 | IMDS-Committee |
| | Zink calcium phosphate coating (Ni-content) | 9501938 / 5 | IMDS-Committee |
