

IMDS CAMDS MDS Data Transfer – additional information how to use this function

1. The IMDS CAMDS MDS Data Transfer function does not require a specific license. However, exporting MDSs from respectively importing MDS into IMDS requires an IMDS Advanced Interface (IMDS-AI) license. For the **car manufacturers / OEMs in IMDS** the use of the IMDS-AI license is included in their contracts.
2. **Suppliers without an IMDS-AI license** need to purchase such a license from DXC Technology. [IMDS-AI page >> Buy](#) or contact mds-solutions@dxc.com Depending on the amount of datasheets the company plans to import to IMDS, the company can select one of the tariffs offered on the webpage. Please note: exported datasheets do not count. For the IMDS CAMDS MDS Data Transfer you do not need the multiple time zone download feature.
3. An IMDS-AI license as a precondition for the transfer is due to the fact that the [policy on sharing IMDS data with other systems](#) (like CAMDS) requires such a license.
4. With the IMDS-AI license as precondition, a Company Administrator must grant the user(s) specific access in the User Administration screen to see and use the Export / Import function in IMDS.
5. Further information can be found in
 - the [IMDS User Manual \(chapter 10\)](#) and
 - the [Release Notes IMDS 12.1](#)
