IMDS Model Office Next rollout 26<sup>th</sup> February, 2020

IMDS Production rollout 17<sup>th</sup> June, 2020

## IMDS Release 12.2 Information

### 1. Default Contact Person

Company Administrators have the option to define one of the contact persons of their company as being the “default contact”. This contact person’s data will be shown in the supplier data and the PDF report in case the contact person originally assigned to the MDS is no longer active.

There can only be a single default contact person per company. Once a contact has become a default contact, this flag cannot be revoked from them anymore. Instead another active contact has to be defined as the new default contact.

Similarly, in order to deactivate a default contact, another contact person has to be defined as the new default contact first.

#### **IMDS-AI (Advanced Interface) relevance? YES**

**Download:** In order to provide the Default Contact information an additional field is added to the CT record in the Company / Contact Download File (à CC File, 0 = not the Default Contact, 1 = Default Contact).

### 2. No default selection for application codes

There will be no default selection for application codes anymore. All application codes have to be actively selected to avoid an Error in the MDS check.

#### **IMDS-AI (Advanced Interface) relevance? NO**

## International Material Data System

### **3. Warning for all Preliminary MDSs**

A Warning will be shown in the check for all references to preliminary MDSs inside a final MDS tree (on any level). It will still not be allowed to reference preliminary MDSs inside newly created final MDSs. The existing check showing an error message in this case will still be in effect.

**IMDS-AI (Advanced Interface) relevance? NO**

### **4. Supplier Code in Inbox/Outbox search result**

The supplier code will be shown in the search result of both screens: MDS Inbox and MDS Outbox.

**IMDS-AI (Advanced Interface) relevance? NO**

### **5. Other IMDS-AI-relevant changes**

A new Data Download File type for data moves will be introduced. The DMV file will contain only relevant data so that the file size and generation time are significantly reduced compared to the current situation.

**IMDS-AI (Advanced Interface) relevance? YES**
