

IMDS Basic Training

IMDS Basic Training

Due to the overwhelming responses from clients that have attended Tetra Tech's IMDS Standard Training, and in partnership with DXC Technology, we have updated our training schedule, effective June 2017, to include IMDS Basic training.

This training session is specifically designed for the novice IMDS user and is a great pre-course for those enrolling in our IMDS Standard training session,

which focuses more on supplier data review, customer-specific requirements, Annex II and the presence of SoCs that are not applicable to Annex II and the application of exemptions.

Tetra Tech continues to use a highly successful, hands-on approach with industry specific examples and exercises to effectively demonstrate the nuances associated with the system. This class will cover the very basic steps required to complete an IMDS submission.

Tetra Tech Office Training Sites

- Ann Arbor, MI
- Research Triangle Park, NC
- Aiken, SC
- Cincinnati, OH
- Orlando, FL
- Mississauga, Ontario

Highlights of Training Sessions

- Overview of the End-of-Life Vehicle Directive
- In depth discussion of Recommendation 001 and 001a
 - ★ IMDS Basic is strongly recommended if you are not familiar with Rec001 and Rec001a, as these are discussed in the subsequent IMDS courses and are essential when working in IMDS in general.
- Basic introduction to the International Material Data System
- Exercises that provide the very basics to IMDS reporting:
 - BoM review
 - Receiving supplier data
 - Creating an MDS
 - Using published data
 - Completing a data submission to the customer
