

IMDS Special Request

Training Description

This training pays attention to your individual requirements and problems, for example:

- ✓ Your customers vary in their specifications. One customer accepts data sheets that another may reject.
- ✓ A very complex construction part causes specific problems. Based on this part we explain data handling in the IMDS.
- ✓ Specific training in the handling of your IMDS in-house system.
- ✓ Your own requirements?

In the workshop, we concentrate on specific issues we agreed upon in advance. We analyze problematic topics and you get tools and tips which enable you to put the acquired knowledge into practice.

tec4U User Trainings

tec4U offers tailor-made IMDS user trainings in respect to your company's individual needs in German or English language. You can choose between in-house trainings at your company or trainings in rooms provided by tec4U.

As an alternative to the conventional face-to-face courses, tec4U provides additional web-based trainings. This allows teaching participants worldwide without time-consuming journeys. The trainings effect by web conference and by phone.

After the workshop, you will receive a certificate verifying your acquired IMDS knowledge. In addition, we provide free of charge support for upcoming questions until six months after the training.

Workshop contents

- Your individual requirements
- The content will be agreed with you in advance
