

IMDS Connect

LEVERAGE EXISTING DATA TO INCREASE PRODUCTIVITY

Help your company leverage data in your current systems and receive a productivity improvement by reducing work for IMDS reporting.

The DXC Technology IMDS Connect is designed to enable locally hosted material data systems to automatically exchange data with the automobile industry's International Material Data System (IMDS). With IMDS Connect, the effort required for data gathering, formatting, and entry substantially decreases. It integrates IMDS data with in-house product lifecycle management (PLM) processes and systems. The increased automation improves data quality and administration.

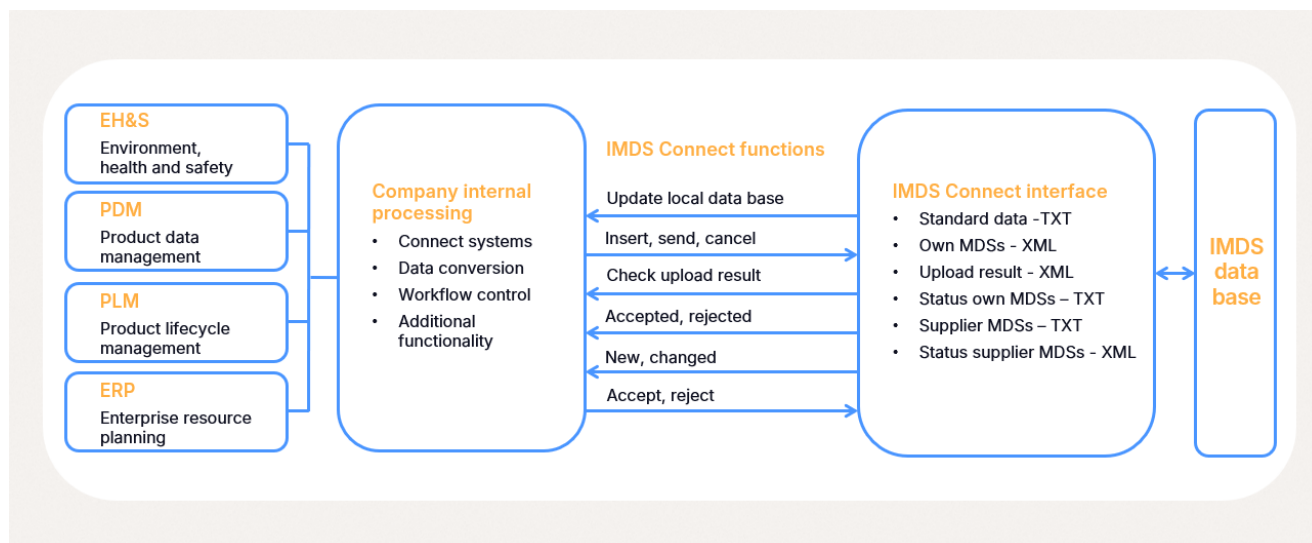

Overcomes challenges

- Leveraging **existing product and material data** for IMDS reporting
- Managing **large volumes** of product and material data
- **Decreasing the effort and error rate** from manual data input
- **Increasing productivity** of IMDS resources
- **Avoiding data redundancies**
- Ensuring **stronger integration** of material data management processes
- **Improve cycle time** for IMDS reporting while supporting IMDS procedures

Key features and benefits

- **Automatic data transfer** using XML (support for batch and online transfer)
- Capability to **transfer large data volumes**
- **Synchronization** of local data and IMDS database
- Transfer of all **MDS status information**
- **Reduces expense**, reporting effort, and data collection
- **Local administration** and integration of product and material information
- **Clear license model** based on uploaded data volume

Why using IMDS Connect?

The download function enables your company to download IMDS standard information, such as the basic substances catalog. Furthermore, the data sheets received by your company, public data sheets, or your own data sheets can be transferred for in-house administration.

With the upload function, your company can transfer data from your local systems to the IMDS data base, send them to your customers, and accept supplier material data sheets.

The interface supports the automatic creation of material data sheets in IMDS - without manual input.

As a local system, our software communicates with the IMDS on the one hand and on the other hand establishes the link with your PDM or ERP system.
